

# COMBO RESCUE

## VERSATILE, DURABLE.

The Combo Rescue has a bit of everything on board. It's a true platform to cover every possible need when a walk-in or non-walk-in alone cannot cover the task at hand. The body is configured with a traditional rear non-walk-in body coupled with a separate or integrated walk-in module. Like any E-ONE rescue product, each part of a combo rescue can be configured to meet many mission critical needs.

# CAPABLE, CONFIDENT.

E-ONE engineers extruded aluminum and formed 304L stainless steel rescues that meet or exceed NFPA standards. With unsurpassed durability that will last the long haul, E-ONE rescues are built to meet the critical needs of your department without sacrificing safety or quality.

## → CUSTOM DESIGNED

Interior spaces can be customized to accommodate a wide array of duties such as communications, rehab, and haz-mat to support your crew in the field.

## → COMMAND AND CONTROL

The need for separate work or command areas on a big incident often calls for a cab configuration outside the norm. The 3-door command cab available on both E-ONE custom cab platforms easily accommodates this need and can be configured to suit your department's specific needs.

## → DUTY DRIVE, ADAPTABLE

From small, specialized truck builds to large multi-function apparatus, E-ONE delivers custom solutions using the best materials and build processes in the industry for long service life and dependable operation.
